

WHAT IS WORDLE?

Wordle takes text that you provide and creates a word cloud out of the text.

A word cloud is a visual representation for text data. The importance of each word is shown with font size or color. It is a useful way to quickly see how important each term is within a text.

HOW TO MAKE A WORDLE:

- Select text you would like to use to create a word map. This can be any text, but it's best if it's more than a paragraph long.
- Visit wordle.net
- Cut and paste your chosen text into the text box.
- You may then print the wordle or save it to a public gallery that you can link to (Caution: this gallery is public and can be viewed by any one).
